Education

RENSSELAER POLYTECHNIC INSTITUTE Troy, NY
B.S in Computer Science & Information and Web Technologies, GPA: 3.70/4.00 Expected May 2028
Relevant Coursework: Data Structures, Discrete Mathematics and Computing, Computer Architecture and Operating Systems, Linear Algebra

Relevant Experience

NYC DOE Division of Instructional and Information Technology
Software Engineering Intern Jul 2026 - Aug 2026

- Refactored a monolithic ASP.NET Core backend into modular components with structured error handling, preserving stack trace integrity
- Consolidated registration writes into atomic transactions, eliminating partial-write bugs and ensuring data consistency
- Resolved multi-user concurrency edge cases, including document upload race conditions, within legacy infrastructure constraints

NEBRASKA WESLEYAN UNIVERSITY
Frontend Web Developer & Project Manager May 2025 - Jun 2025

- Collaborated on the design and development of the official web app for NWU's Wesleyan Institute for Successful Educators (WISE) program to enhance digital outreach and educator engagement
- Engineered responsive frontend components using HTML, CSS, and JavaScript to deliver an accessible, user-centric interface
- Optimized core site navigation and eliminated layout redundancies

BRIDGE TO COLLEGE
Frontend Engineer / Developer Mar 2025 - Aug 2025

- Co-developed interactive virtual experiences in Unity (C#), writing application logic and state management systems for fluid runtime execution
- Designed high-fidelity user interfaces in Figma, translating responsive wireframes into intuitive cross-platform client applications

Technical Skills & Projects

Programming: C, C++, C#, SQL, Python, JavaScript, Java
Design: Wix, Adobe, Figma

Sunhee's Farm and Kitchen: ITWS 2210 Final Project Jan 2026 - Apr 2026

- Redesigned the user interface and improved UX using Figma to create high-fidelity prototypes
- Streamlined site architecture to enhance navigability and eliminated redundant design elements, improving overall user flow

Market Simulator - Godot C# Aug 2026 – Present

- Developed enemy and item behavior systems in C# within Godot, using signals, nodes, and scene composition to manage AI logic and interactions
- Designed a probability-based encounter algorithm to dynamically determine enemy spawns versus neutral events, balancing gameplay pacing and difficulty as part of a team project

Awards & Honors

HV Open Data Hackathon - **First Place** Apr 2026

- Selected as the top project out of 20+ teams for developing "GoTo," an AI-powered urban planning platform mapping regional transit deserts
- Served as Data & Research lead, aggregating and validating NYSED, CDTA, and Census ACS datasets
- Designed the core travel-time methodology using walk-wait-ride metrics to power the platform's multi-factor route scoring engine
